

An Evaluation of Quality Twelve-Month Agricultural Education Teaching Positions

Evaluation Instrument

Agricultural Education Teacher/FFA Advisor Name

School Name

Calendar Year

NC STATE UNIVERSITY

Introduction

Components in the North Carolina Agricultural Education Accountability Model have been developed to assist Agricultural Education teachers and school administrators in ensuring that the appropriate activities are completed for all twelve-month agriculture teacher positions.

Each program component is followed by a “yes” or “no” answer. A “yes” answer earns the full points allowed. A “no” answer earns no points. Partial points are not awarded. Teachers should maintain a file of supporting evidences to substantiate their responses. These quality indicators are focused on aspects of a total agricultural education program and appropriate planned activities during the summer months. The overall points total will determine the twelve-month employment status of the local agricultural education teacher.

The total number of possible points in this instrument is **154**. The minimum number of points needed to be eligible for 12 months of employment for the following school year is **100**.

This evaluation instrument should be completed annually in January, following the calendar year of evaluation. This instrument is designed to be completed at the local level. This evaluation instrument should only be completed for teachers who have taught at the same school for an entire calendar year.

This evaluation instrument may be used for calendar year 2022 and beyond.

Please contact the North Carolina Agricultural Education Staff for additional assistance.
